R Markdown

This is an R Markdown document. Markdown is a simple formatting syntax for authoring HTML, PDF, and MS Word documents. For more details on using R Markdown see <http://rmarkdown.rstudio.com>.

When you click the **Knit** button a document will be generated that includes both content as well as the output of any embedded R code chunks within the document. You can embed an R code chunk like this:

```
library(outbreaks)
library(ggplot2)
library(incidence)

onset <- ebola_sim_clean$linelist$date_of_onset
class(onset)

## [1] "Date"
#> [1] "Date"
head(onset)

## [1] "2014-04-07" "2014-04-15" "2014-04-21" "2014-04-27" "2014-04-26"
## [6] "2014-04-25"
#> [1] "2014-04-07" "2014-04-15" "2014-04-21" "2014-04-27" "2014-04-26"
#> [6] "2014-04-25"

i <- incidence(onset, interval = 7)

for (n in seq(1,2)){
  print(plot(i))
}
```

Including Plots

You can also embed plots, for example:

Note that the `echo = FALSE` parameter was added to the code chunk to prevent printing of the R code that generated the plot.
